

HyperCloudSoft

Official LinkusPBX reseller · Singapore

FOR SINGAPORE SMES ON LEGACY PABX OR 3CX

Move your office phone system to the cloud

LinkusPBX is a hosted cloud phone system built on Yeastar. No PBX box in your office, your team calls from desk phones or the Linkus apps, and HyperCloudSoft handles the move for you locally.

What is LinkusPBX?

LinkusPBX is a hosted cloud IP-PBX built on the **Yeastar P-Series** platform and sold to SMBs across Southeast Asia.

It replaces the PABX box, wiring and maintenance with a phone system that is hosted for you. Staff connect through the **Linkus** apps (Yeastar's unified-communications clients) or SIP IP phones, wherever they work.

Hosted on **AWS** in an active-active, high-availability cluster with a published **99.9% uptime SLA**.

Cloud PBX vs a traditional PABX

- No on-site PBX box to repair or maintain
- Work remotely on the same company system
- Add users in a web portal
- The provider manages updates
- Supported IP phones can be reused after a compatibility check

Key benefits

Exact feature availability depends on plan and licence.

No on-site PBX hardware

Your phone system runs in the cloud. No PABX box, server room or hardware repair risk.

Linkus apps on every device

Windows, Mac, iOS, Android and web browser (nothing to install). Calls, video meetings, team chat and presence.

IVR, queues & ring groups

Auto attendant menus, call queues, ring groups, voicemail and business-hours routing for after-hours calls.

Encrypted call recording

Record calls securely, with call reports, a real-time wallboard and a queue panel.

CRM integrations

HubSpot, Salesforce, Zoho CRM, Zoho Desk, Zendesk, Bitrix24, Odoo and Microsoft Dynamics 365: click-to-call, call pop-ups and contact sync.

Singtel SIP certified template

Singtel SIP trunk is a pre-configured, Yeastar-certified ITSP template on the P-Series platform.

3CX migration tool

Import a 3CX V18/V20 backup: extensions, IVR, ring groups, queues, routes and more.

Number porting check

Want to keep your numbers? We confirm porting eligibility with the carrier before any cutover is agreed.

Simple 3-step onboarding

1

Assess

We review your users, peak simultaneous calls, existing numbers, devices and network readiness.

2

Set up

We configure extensions, call flows, apps and desk phones, and plan your number porting.

3

Test & go live

We test inbound and outbound calls, transfers and voicemail, train your staff and agree the cutover date.

The timeline depends on users, devices and porting, and is agreed after the assessment.

Moving from a PABX or 3CX

From a legacy PABX

- The PABX box, wiring and maintenance are replaced by a hosted PBX
- Users connect through Linkus apps or IP phones
- Analog phones, fax machines and analog lines may need a Yeastar gateway
- Plan the move around your contract or maintenance end date

From 3CX

- Yeastar's migration tool imports a 3CX V18/V20 backup
- Brings across users, extensions, IVR, ring groups, queues, prompts, business hours, trunks and routes
- Imported trunks are tested before go-live
- We support both 3CX and LinkusPBX, so you get honest advice on whether to stay or move

Why HyperCloudSoft

- ✓ **Official partner.** Official Yeastar partner and Singapore reseller of LinkusPBX.
- ✓ **One partner for PBX and telco.** We help arrange the phone system, SIP trunk and numbers.
- ✓ **Numbers checked first.** Porting eligibility confirmed before any cutover is agreed.
- ✓ **Local Singapore team.** Support Mon–Fri, 9am–6pm SGT. Meetings by appointment at Sin Ming Lane.
- ✓ **Honest 3CX advice.** We work with both platforms and recommend what fits.
- ✓ **Security built in.** TLS/SRTP encryption, 2FA, IP and country restrictions, toll-fraud controls.
